

Web Design Project Overview

Mikey Dolan, 20443864

Features :

- All pages include a header with links to each part of the website.
- All pages include a footer with links to social media websites. I took the logos from [here](#) and styled them myself.
- A homepage with an embedded google maps link and some images.
- An 'about us' section containing some images and lorem ipsum text.
- A food menu, with buttons to navigate to each part of the menu.
- A reservations section, which contains a form for users to enter information such as date, time, amount of people etc.. When the user submits their information, their data is stored locally, and relayed to them in the reservation-confirmation page. The user also receives a confirmation number, which is a random number between 0 and 100000.
- A feedback section which contains another form for users to enter feedback. I originally wanted this to send an email to both me and the user containing the information from the form. However, it seemed like I needed some sort of email server to do this, and couldn't do it locally. Now, it just takes the user to a thank you page.

Other Notes :

- All of the images used are from Canva. I have a pro account and it seems like these images are copyright free. More info on this [here](#).
- Although no code was directly taken from anywhere, [W3Schools](#) was the main resource I used when researching various features.
- I wanted to use a mainly black and yellow color scheme for the website as I think they go well together. [This](#) restaurants website uses a similar color scheme and although no code was taken from here, I did take inspiration from them.
